

CV BUILDER

A modern web-based tool for creating professional CVs with ease.

PROJECT STATUS

■ In Progress — Active Development

New features, improvements and updates are coming soon.

Project Overview

CV Builder is a web development project designed to simplify the process of creating a clean, structured and professional CV. Users can enter their personal, educational and technical information and use the collected data to build a CV in a consistent format.

Why This Project?

Creating a CV from scratch can be time-consuming, especially for students and beginners. This project aims to provide a simple interface that guides users through the required information and makes CV creation faster and more convenient.

Planned / Current Features

- Personal information — name, email, phone and date of birth
- Education details
- Technical and other skills
- Projects and achievements
- Language and English-level information
- Profile photo upload
- LinkedIn, GitHub and portfolio links
- Responsive design for different screen sizes
- CV generation and professional formatting

Technology Stack

Technology	Purpose
HTML5	Page structure and form elements
CSS3	Custom styling and responsive presentation
Bootstrap	Responsive layout and UI components
JavaScript	Planned interactivity and CV generation

Development Roadmap

- Build and refine the CV input form.
- Add dynamic CV generation and preview.
- Improve template design and customization options.
- Add validation and user-friendly interactions.
- Test responsiveness and polish the overall user experience.
- Release further improvements in upcoming versions.

Project Vision

The long-term goal is to turn CV Builder into a practical, easy-to-use tool that helps students, freshers and job seekers create professional-looking CVs without needing advanced design skills.
